### **GAS FILLING MACHINE WITH SENSOR**

### **Mod M GGS100**

- One canal filling
- Sensor for the presence of the gas
- Calculation and control of the filling with PLC
- Button to start filling
- Analysis and light cycle start
- Pre-heating temperature of the gas to be analyzed.
- No calibration: The software automatically manages the filling
- Operation with PLC Mitsubishi

The machine fills the gas automatically when the panel is saturated with gas, warns the operator and stops charging automatically. The machine works with different types of gas
